## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election of Group II in the reply filed on November 4, 2008 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
  2. Ascertaining the differences between the prior art and the claims at issue.
  3. Resolving the level of ordinary skill in the pertinent art.
  4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
4. Claims 19-24, 28-31, 35 and 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Poix et al (6261652) in view of Smith et al (4818730).

Poix et al discloses an insulated glazing unit comprising two glass sheets 2, 3 held apart by ceramic/glass spacers 4 per independent claim 36 and the other claims

dependent thereon (see figures 2 and 4). The ceramic/glass spacers are adhered to the glass sheets with a bonding enamel material 13 (see column 6, line 66 through column 7, line 32). Poix et al does fail to disclose a metal oxide mixed with the enamel.

However, Smith et al discloses that it is known to add metal oxides to enamels in order to improve their bonding characteristics. Refer to column 2, lines 51-60.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to Poix et al to add a metal oxide to the enamel, as is taught to be known by Smith et al, in order to improve the bonding characteristics thereof as is disclosed.

### ***Response to Arguments***

5. Applicant's arguments filed June 6, 2008 have been fully considered but they are not persuasive. The applicant argues that Smith et al is concerned with metal to glass adhesion and not glass (e.g. substrates) to glass/ceramic (e.g. spacers) adhesion. However, Smith et al does teach to include metal oxides in enamels to improve bonding characteristics, therefore, it would be obvious to include the oxides for improved bonding no matter what the materials of the layers that are bonded.

### ***Conclusion***

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
